Physical activity/obesity

Prenatal Smoking

- **14% pregnant women smoke cigarettes** (SAMHSA, 2015)
- **2 out of 5 children exposed to second hand smoke** (CDC, 2015)
- □ Increases the risks of:
 - Miscarriage, low birth weight, preterm delivery, and NICU admission (Bailey et al., 2012)
 - Adverse infant outcomes including SIDS (Treyster & Gitterman, 2011)

Substance Use during Pregnancy

- ~30% of prenatal substance use among socioeconomically disadvantaged women (Beatty et al., 2012)
- □ Up to 80% of substance-using women able to abstain from at least one substance during pregnancy (Forray et al., 2014)
- □ Cigarette smoking, as the most common substance used, with the poorest short and long-term cessation rates (Forray et al., 2014)

Prenatal Smoking & Drinking

- Synergetic adverse effects of smoking and drinking during pregnancy (Odendaal et al., 2008; MMWR, 2016)
 - Birth weight, pre-term delivery
 - Fetal alcohol spectrum disorders (FASDs)
 - Smaller head circumference
 - Maybe worse effect than other illicit drugs (e.g., Jones et al., 2013; Slotkin, 1998)

□ Pregnant smokers at risk for prenatal drinking (Cannon et al., 2012)

✤ 11% pregnant women reported prenatal alcohol use (NSDUH, 2013)

Increase Focus on Target Behavior by Increasing Saliency

Psychol Rep. 2017 Jan 1:33294117720937. doi: 10.1177/0033294117720937. [Epub ahead of print]

Incentive Use for Improving Maternal Health: Perspective From Behavioral Science.

Washio Y¹.

Author information

Abstract

Incentive use to improve maternal health behavior has been controversial, and guidelines to effectively design and implement such an intervention have been published. This commentary briefly describes a perspective from behavioral science for the existing guideline on the development of an incentive-based intervention to change maternal health behaviors. It is recommended to emphasize the saliency of incentives as an important variable to maintain the intervention effect while addressing barriers to feasibility and sustainability.

KEYWORDS: Maternal health; health behavior change; health incentives; saliency of incentives

CHRISTIANA CARE HEALTH SYSTEM NEMOURS THOMAS JEFFERSON UNIVERSITY UNIVERSITY OF DELAWARE

Health Incentives for Pregnant Populations

□ Smoking cessation (Higgins et al., 2012)

- Smoking abstinence (Lumley et al., 2009)
- Fetal growth, birth weight, % low birth weight (Higgins et al., 2012)

Breastfeeding duration (Higgins et al., 2010)

Cocaine abstinence (Schottenfeld et al., 2011)

Incentive Use for Pregnant Smokers

□ Vermont clinical trials for pregnant smokers

- (Higgins, Washio, et al., 2012)
 - Incentives on attendance only vs. smoking abstinence (i.e., cotinine)
 - Escalating incentive amount (\$6.25+\$1.25; max:\$1,000; average:\$500)
 - Incentives contingent on carbon monoxide levels in breath samples (<6ppm) in the first week</p>
 - Incentives contingent on cotinine levels in urine samples (<80ng/ml)</p>

AAP Says No Amount of Alcohol Should be Considered Safe During Pregnancy

10/19/2015

A new clinical report from the American Academy of Pediatrics (AAP) identifies prenatal exposure to alcohol as the leading preventable cause of birth defects and intellectual and neurodevelopmental disabilities in children. The report, "Fetal Alcohol Spectrum Disorders," in the November 2015 issue of Pediatrics (published online Oct. 19) stresses that no amount of alcohol should be considered safe to drink during any trimester of pregnancy.

Washington Post

Parents.com / Pregnancy & Birth / Everything Pregnancy / What Life as a 43-Year-Old With FASD is Like

What Life as a 43-Year-Old With FASD Is Like

A mom who drank alcohol throughout her pregnancy shares what her grown daughter's life is like today.

We recently reported on a study that found as many as 428 conditions are associated with FASD, or Fetal Alcohol Spectrum Disorders. As if expectant women need any more reasons to put down that wine glass, now a mom named Kathy Mitchell is opening up about what happens to a child when you drink during pregnancy, as she did.

Mitchell's daughter Karli is no longer a child; she's 43-years-old, but according to *The Washington Post*, she has the developmental capabilities of a first-grader. Karli collects stickers and dolls, and wears Hello Kitty pajamas, much like my own 7-year-old does. She needs help to navigate everyday situations, like crossing a street, or recognizing danger, or even remembering to brush her teeth; again, much like my own daughter, who is in second grade.

Incentivized Alcohol Monitoring

Community-Initiated Pilot Program "My Baby's Breath" to Reduce Prenatal Alcohol Use

Yukiko Washio, PhD; Julie Frederick, DBA, MBA, BSN, RN; Anne Archibald, CMA, MBA; Nathan Bertram BA, PHR; Jody Allen Crowe, MEd

Introduction

Prenatal exposure to alcohol can cause a broad range of adverse developmental effects including birth defects and intellectual neurodevelopmental disabilities, called fetal alcohol spectrum disorders (FASD).¹ FASD can be manifested in various ways including congenital neurologic, cognitive, behavioral, and (at the extreme) morphological aspects among neonates that are directly traceable to maternal alcohol use during pregnancy. FASD is one of the leading causes of physical

Incentivized Alcohol Monitoring

- Potential tool to reinforce alcohol abstinence among pregnant women
 - Real-time monitoring allows flexible monitoring schedule and an immediate assistance
 - Allows immediate reinforcement or immediate assistance in case of alcohol-positive samples

Hate for Incentive Use (Stakeholder Issues)

A Sad State of Affairs

Peter V. Rocca, MD

A s a result of a collaborative work between Harvard University and the National Bureau of Economic Affairs, Roland G. Fryer, Jr. published an article entitled "Financial Incentives and Student Achievement: Evidence from Randomized Trials." The paper summarized the results of a two year experiment (2007-2009) in which approximately 27,000 public school students in Chicago, Dallas, and

a "more relaxed employee" who, in turn, is more productive for the company.

In this issue of the DMJ, Washio and colleagues (*Community-Initiated Pilot Program "My Baby's Breath" to Reduce Prenatal Alcohol Use)* describe a financial incentive program in which pregnant women "at risk for continued drinkingincluding..... underage drinking, arrest from driving under the influence or treatment history of Since when did we become a nation which pays its people to do what we think they are supposed to do?

As a physician, I applaud the use of resources for the purpose of medical
